We will focus on select Indian states where healthcare infrastructure is lagging because of lack of access to reliable sustainable and affordable source of electricity. The project will include design and installation of RE solutions customized to the needs of the healthcare facilities which are not connected to the grid or are dependent on polluting diesel generator sets. The project will result in establishment of new healthcare services and improve existing services in the healthcare facilities in select Indian states. Outcomes will include improved and enhanced healthcare service delivery through clean energy options - helping India achieve multiple sustainable development and climate goals. The restoration opportunity assessment for Sidhi identifies at least eight restoration interventions that can be implemented in Sidhi. Operationalisation of this restoration opportunity assessment and its implementation in Sidhi can lead to sequestration of 7 million metric tons of additional carbon over 10 -20 years based on the species planted. This amounts to an increase in the carbon stock of 37	11208023.00
